

TAYLOR & CRAWLEY

1965 Ford Falcon

Chassis Number 4H13F16415

Sixties saloon car racing was dominated by American muscle cars such as the Mustangs and Falcons, they took on the more nimble Minis and Lotus Cortinas and ensuing battles of grunt versus cornering produced some of the most exciting racing seen. It was a legendary period and the popularity of the BTCC has grown from those original roots.

This Falcon was purchased from Stefano Rosina in Italy where it had been a successful FIA race car. The shell was completely stripped and the car rebuilt in early 2018 and is in immaculate condition with fibreglass boot, doors, wings and bonnet, polycarbonate side and rear windows, it weighs 1,158kg.

Fitted with a new 289 small block Ford V8 producing over 400bhp, top loader gearbox, gripper 3.5 diff in a 9" axle, single adjustable Ohlins dampers, 120ltr alloy fuel tank with two holly pumps, new Odyssey battery and a new fire extinguisher. The suspension and running gear have also been stripped, parts inspected and refurbished or replaced where necessary.

Since the above work was completed this Falcon only done one test day and one race.
